

AUSTRALIA / NZ Testimonies

Hello Everybody

This is a testimony from myself, David Cochrane, in regards to Ethos FR a fuel reformulator soon to come here from San Diego USA.

Upon hearing that I was to get a demonstration bottle I tested my car with a mixture of town and country running and worked out the car was doing an average of 11.1 km/hr.

I then added 150ml (5oz) of Ethos FR to the motor and 60ml (2oz) to the first tank full of petrol. I then did a further 415 km and topped up in Tinwald yesterday (Sat 3 June). It took 35ltrs which worked out to an increase to 11.85 km/ltr.

We then spent the rest of the day around Christchurch cruising from place to place and then eventually back to Timaru. I then filled up today (sunday) topping up with 21.59 ltr. The tripmeter showed we had done 295 km since filling up at Tinwald. A rate of 13.66 km/ltr or an increase of 2.56 km/ltr since starting the trial.

This amounts to an increased saving of approx 23%.

Doubtless you will understand that we are over the moon about the initial success of the product and happy with the extra 100 odd km we get out of each tank full.

It appears that the first tank full has a cleaning action and it may take several tank fulls to get the full effect of how good this product is.

Thank you
David & Yvonne - New Zealand

Our Ethos FR test results – 07/06/2006

20 ton Tip Truck – N series Ford (Hino) model 3222 , 1990 year.

We have always kept a record of our fuel mileage ; eg May 16, 2006 Km's travelled 440, diesel fuel used 172.87 Litres = 2.54 km's per litre.

May 23, 2006 Km's travelled 427, diesel fuel used 172.5 Litres = 2.47 km's per Litre.

May 24th Added 2x12 oz or 375 ml bottles of Ethos FR to crankcase of engine.

Also 1x12 oz / 375 ml bottle of Ethos FR to 180 Litres of Diesel fuel.

We warmed up the engine for about 8 to 10 minutes before pouring in the Ethos in. As Kay & I stood talking beside the engine, while the truck cab was still tilted forward the engine change it's tone as the Ethos circulated. The engine was very definitely quieter, the harshness went from the exhaust note.

After loading and leaving the sawmill we contract cart for out on the main road our first obstacle is a good pull from a standing start up the Herbert Hill. I was surprised to see a lot less exhaust diesel black smoke on the hill, the truck was already running better, I was driving for four hours that day and it was running sweeter by my return home. June 7th , After 404 Km's Fuel Used was 138.00 Litres. WOW, that's 2.927 Km's per Litre. 2.927- 2.5. Previous test's 2.54 & 2.47 Ks Per Litre – AV = 2.5 = .427 of a km per Litre, that's a FUEL INCREASE OF 17.09% on the first tank , with less exhaust Smoke and More Power. That say's it all for me, try it, you too will smile. If I do 20,000 Km's in one year I will use 8000 Litres of diesel ... 8000 x .427 metres = == 3416 extra km's for the same amount of fuel. I think people will take notice now , HAVE YOU ???

HAPPY SAVINGS
Kay & Allen McKenzie. New Zealand

Rick Boatright I put some Ethos FR in my old 99 pick up truck and drove 160 miles UP the mountain and back, passing people going uphill to make sure I really tested it. I filled up when I returned and discovered that I'd gotten an extra 5 MPG! My wife and I noticed that it ran smoother and had more power too. That was an extra 29% in mileage. I was impressed! Then I put some in my 04 Honda Hybrid. But I only put it in my gas, not the oil too. I got an extra mile per gallon -- better but not by much. Then I decided to follow the directions and put some in the oil too. It gave me an extra 5 MPG on top of the previous one for a total of 6 MPG. A tankful after that, I checked it again and it was up to 8 MPG better! Needless to say, I'm a customer for life!

My husband and I have an older car, a 97 Ford Taurus GL. We live in Houston and do a lot of City driving. We were getting 15 MPG when we first put Ethos in our car. The next time we put gas in our car the mileage went up to 16.79! The third time we filled up, our mileage was 16.83. The last we calculated the mileage it was 18.86 MPG!! That is a enormous increase. We also had a miss in our engine that is not there anymore. The car rides much smoother. The transmission has suddenly started going out. My husband put Ethos in the transmission fluid. Before he Ethos in, it would barely shift. Going to work was very difficult. Now, the transmission is shifting a lot smoother. He can get to work without too much worry until we can get the transmission replaced! Ethos really works and I feel is truly an amazing product.

Yesterday Tom came in the house saying, "I can't believe this!" Naturally I asked him what he was talking about. Then he proceeded to tell me that he checked the oil in his farm tractor and it was just as clean as it was the day he put it and EthosFR in it several months ago. I don't know too much about tractors so he explained to me that the oil used to get dirty immediately after he changed it. That was BEFORE EthosFR. Thank you, EthosFR....more protection with less frequent oil changes!!!

I have thoroughly tested the results of Ethos FR on our two family vehicles. I drive a 1990 Buick LeSabre. WAS getting consistently about 18 mpg combined driving. NOW I consistently get 22 - 24 mpg. That's over 20% improvement! My wife cleans houses, and drives our children everywhere. She drives a 1995 Mercury Villager. Prior to Ethos, she was only getting at best 16 mpg... NOW, she regularly hits the 19-20 mpg range! That's over 16% improvement! As a family of five, car payments are not an option for us now. As a former car salesman, I do not believe in putting money into a depreciating asset, which is all most any vehicle is. With regular Ethos FR in our tanks, we are also extending the life of our vehicles as well, AND they run much smoother with noticeable increase in acceleration! Join today!
